ARM Lab #2 Grading Sheet

10%   Reasonable comments are present in the source code

20%   ATM handles correct input and flags incorrect input, for example, it gives error messages when the amount requested is not on a $10 boundary (a request for $25 should be flagged as incorrect, for example)

10%   When the ATM runs out of $20 bills, it dispenses $10 correctly

40%   ATM dispenses cash correctly using $20 and $10 bills

20%   ATM supports exactly 10 customers per day

NOTE: this implies there is a certain set quantity of each kind of soft drinks, the machine can run out,
